

GR85 series have all AR400 1/2" outer tines and 1/2" inner tines. The outer grapple tine is 5/8" The GR85 is based on using the full power of a 85hp tractor. It can be used on higher hp machine for general use. These units have been time tested throughtout the industry.

GR85-HC series have all AR400 1/2" outer tines and 1/2" inner tines. The outer grapple tines are 5/8". The GR85 has all the same features just longer lower tines. This unit have been time tested throughtout the industry as well.

Both units have 3"x 8" cylinders, which are rated at 3000 psi. At 3000 psi the combind is 42,412 lbs of force.

The mounts on these units are low and tight against the main frame to retain the factory breakout force.

Like all of the Anbo product line the lower tine are smooth with no protrusions or jagged teeth, this lets the material slide up and not bunch up at the bottom and when dumping the material will not hang up on the rake. This prevents you from having to shake the grapple rake to dislodge smaller branches and roots
